World-Class Library Selects Best-in-Class RFID

When Liberty University in Lynchburg, Virginia looked for an RFID technology partner for their new state-of-the-art library, EnvisionWare rose to the top. The new $50 million dollar library offers students cutting-edge technology, diverse learning environments, scholarly resources, and comfortable study space and includes both traditional and innovative learning formats. Centrally located, the 4-story, 170,000 square foot library is intended to serve as the heart of campus activity and learning.

The EnvisionWare RFID installation includes staff circulation, technical services, and security gates. The RFID system integrates with the Library's Voyager Integrated Library System (ILS) from Ex Libris.

"The new library was designed to accommodate the university's explosive growth and the diverse and changing needs of residential and online students," said EnvisionWare co-founder and CEO Mike Monk. "It's a compliment to our technology and service to be selected as the RFID partner for such an impressive and world-class library."

In addition to the main university library, the Library at the Liberty University College of Osteopathic Medicine has also selected EnvisionWare for RFID. In addition to RFID, the library will install the EnvisionWare® X1 Self-service Station for student circulation and EnvisionWare security gates.
