

Copy Payment Manager™ (CPM) provides patrons with the flexibility to choose how they pay for copies and enhances and streamlines financial reporting and reconciliation from copy transactions.

When used in conjunction with EnvisionWare's eCommerce Services and enhanced coin and bill hardware (CBA-VX or X11-V Vending Kiosk), Copy Payment Manager enables patrons to pay for copies using ILS and AAM deposit accounts, credit cards and cash/vending payments. The software centralizes financial reporting between the coin-op and other fund sources to record payments and provide a comprehensive view of all money collected from copying, regardless of payment type.

This self-service application can be added to an existing computer reservation and print release terminal, enabling patrons to run copies and release print jobs from a single self-service station, streamlining printing and copying among multiple users.

Copy Payment Manager integrates seamlessly with EnvisionWare's X11-V self-service station to offer an integrated solution for copies, printing, fines, account revalue and other services.
