Ease and Value Win Over Winter Park

When it was time for Winter Park Public Library (WPPL) in Florida to migrate from their legacy CheckPoint Systems platform, library staff evaluated all of the major RFID systems on the market today before selecting EnvisionWare. The library cites EnvisionWare's self service stations, easy-to-install technology and excellent value as the basis for their decision.

Winter Park has a collection of approximately 185,000 volumes and has an annual circulation of over 600,000. The library uses a SirsiDynix Integrated Library System. The CheckPoint migration includes EnvisionWare® RFID Software Suite™, OneStop™ self service circulation system, and eCommerce.

"This project was made possible through a generous grant from the City of Winter Park and from donations from members of our community," said Craig Stillings, assistant director at Winter Park. "We're extremely fortunate to have such strong support from our city's leadership and our private donors, particularly in this challenging economy. We are excited about the new capabilities EnvisionWare's self service terminals will give to our staff and patrons."
