

EnvisionWare® Branch Manager™ software combines robust, enterprise wide functionality with enhanced communication tools to make it easy to manage and monitor communications and alerts at the branch level and across your library system.

TARGETED COMMUNICATIONS FOR STREAMLINED MONITORING

Branch Manager communications software monitors and delivers targeted alerts and people counts from RFID gates to designated staff stations, as well as alerts and email receipts from OneStop™ self-service circulation stations.

This powerful software offers the ability to filter and deliver messages so that Library staff receive only the alerts that pertain to their department or branch.

- Designate Subscribers and Groups by individual client stations at the branch level
- Filter relevant notifications to streamline staff workflow and responsiveness
- Segment alerts by function or location in the Library through established Groups

SIMPLIFY MAINTENANCE AND MANAGEMENT SYSTEM WIDE

Branch Manager enables administrators to manage the entire system from a browser window, saving time and money by reducing the number of host computers required to install and manage the system. Robust reporting capabilities provide a detailed view of activities system wide, including people counter data.

INTUITIVE, GRAPHICAL ALERTS FOR RAPID RESPONSE

Graphical alert icons make it fast and easy for staff to determine when they need to investigate a problem or when they can bypass an alert. Alert options include checked out status, title and media type. With the checked out status alert enables staff to quickly see if the item is checked out in the ILS.

- Green check box indicates the item is checked out in the ILS
- Red check box indicates the item is not checked out in the ILS and staff need to investigate

Branch Manager is compatible with all of the data models available in EnvisionWare's RFID Software Suite™ as well as EnvisionWare and Feig Standard and Wide Aisle gate systems.
